## 3D METALFORGE PARTNERS WITH PAR PACIFIC TO CAPTURE THE BENEFITS OF ADDITIVE MANUFACTURING

**26 August 2021:** 3D Metalforge (ASX: 3MF) (“3D Metalforge” or the “Company”), a revenue generating Additive Manufacturing company, is pleased to announce that it has partnered with Par Pacific Holdings Inc (“Par Pacific”) a leading refining company operating three US based refineries with a total refining capacity of 154,000 barrels per day.

3D Metalforge is working with Par Pacific in Hawaii to identify a range of parts that will be suitable for production using 3D Metalforge’s propriety additive manufacturing technology. After successful field testing of these parts and the expected adoption of API (American Petroleum Institute) standards, both companies plan to introduce 3D manufactured parts into Par Pacific’s regular supply chain, initially in Par Pacific’s Hawaii refinery, before being expanded to the rest of Par Pacific’s refineries.

3D Metalforge CEO, Matthew Waterhouse said: “We are thrilled to be starting this project with Par Pacific and having an opportunity to show how our additive technology can help refineries make their operations and supply chains more robust and sustainable.”

3D Metalforge’s intelligent Additive Manufacturing approach is already supporting many industry-leading, global clients, in a range of market sectors, move toward greener manufacturing and production technology.

Whilst the current contract of this partnership is immaterial in value, it is an excellent validation of the Company’s technology and market traction.

**ABOUT 3D METALFORGE**

3D Metalforge (ASX: 3MF), founded in 2015, is a leading Additive Manufacturing (AM) company that supports a growing multinational industry-leading client base with their advanced proprietary 3D additive manufacturing systems. The Company offers a full range of in-house AM printing services from design and engineering, material advisory, diagnostics and testing, to printing and post-production certification to the latest industry and API standards. Its approach to industrial production, its proprietary processes and eco-friendly technology produce high-demand parts faster, better and more cost-effectively with less environmental impact and greater sustainability than conventional manufacturing.
